The q.s. AQUA remainder must not be calculated as an exact amount while attached supplier materials contain ranges or incomplete disclosures.

Regulated functions for the OCTOCRYLENE and ZINC OXIDE contributions are intentionally not declared in this document. The reviewer should confirm them only if the product use makes the positive-list check applicable.

Expected assembly checks

The same verified ingredient may occur directly and inside one or more trade-name materials. Regulens should aggregate only verified finished-product contributions, retain interval qualifiers and preserve every source document/page.
